PORTAL INCLUDING DETACHABLE AND REATTACHABLE PORTLETS

Abstract

A portal may include at least one detachable portlet and a detach feature included in the at least one detachable portlet. In another embodiment, a method to detach and reattach at least one portlet to a portal may include detaching a selected portlet in response to activating a detach feature. The method may also include reattaching the detached portlet in response to activating a reattach feature. The selected, detached portlet may be transferred to a window in response to activating the detach feature.
